Presentation on Capstone Project Execution (CPE–316004)

Topic	**Digital GroceryHub System**	
Presented by	1. Narendra Prabhakar Baisane	
	2. Satyam Paresh Bhavsar	
	3. Siddhesh Prakash Chaudhari	
	4. Durgesh Tryambak Deore	
Guided by	Ms. M.L.Manikhedkar	
Semester	**Sixth (K Scheme)**	**Date :** 07/03/2026

Abstract

- Digital GroceryHub System is a modern e-commerce platform that streamlines shopping for household essentials and dairy products. It replaces physical store visits with an intuitive interface, providing a stress-free experience for busy consumers. Featuring secure checkout and professional delivery, the system ensures high-quality service and reliability. Ultimately, it offers a user-centric digital framework to keep homes well-stocked with maximum efficiency.

Introduction

- Digital GroceryHub is a modern e-commerce platform that delivers grocery and household essentials directly to customers' doorsteps.
- It saves time by allowing users to shop online instead of visiting physical stores.
- The platform provides a simple and user-friendly interface for a smooth and stress-free shopping experience.
- Customers can order a variety of products such as dry goods, pantry items, dairy products, and daily household necessities.
- With reliable delivery service and competitive pricing, Digital GroceryHub ensures quality products and customer satisfaction.

Literature Review

- Digital Shift: Rising e-commerce demand due to time-efficiency.
- Market Focus: Prioritizing non-perishables to minimize logistical risks.
- UX/UI Impact: Clean interfaces reduce cognitive load and boost retention.
- Trust Building: Secure payments and tracking drive customer loyalty.

Problem Definition

- The existing grocery system suffers from manual errors and a lack of real-time inventory tracking, forcing customers to visit stores physically. There is an urgent need for an automated web-based platform to provide seamless online ordering and real-time stock visibility for both users and owners

Scope of the project

- User Module
- Registration & Login: Secure account creation and profile management.
- Browsing & Filtering: Easy navigation by categories (Dairy, Pantry, etc.) with search.
- Product Details: Viewing images, descriptions, and weight/quantity.
- Order Placement: Confirming orders and selecting Delivery Time Slots.
- Admin Module
- Inventory Management: Add, update, or delete products and manage stock levels
- Category Control: Manage grocery categories and sub-Categories.
- Order Processing: Track, approve, and update status of all incoming orders.
- User Management: View registered customers and manage delivery addresses.

Conclusion and future scope

- **Conclusion:**

- This Digital GroceryHub System, delivery project provides an efficient and user-friendly web-based system that automates the entire process of browsing, selecting, and ordering household essentials. By replacing traditional manual shopping and phone-based orders with a digital solution, the system improves accuracy, reduces the time spent on daily chores, and enhances overall customer convenience. The application offers real-time product availability. transparent pricing for all items (excluding vegetables), and secure data handling for user addresses and order history, making it highly beneficial for both customers and shop owners in managing daily deliveries effectively.

- **Future Scope:**

a) Mobile Application Development

b) Online Payment Integration

c) Automated Notification Alerts:

d) Subscription-Based Models
